vehicle, and transmitting the calculated result to the server when the mobile phone is in wireless communication with the vehicle tracking device. The server includes data of a delivery route of the mobile phone, is for transmitting data of the delivery route to the mobile phone when the vehicle tracking device is in wireless communication with the mobile phone, and for calculating a delivery route of the mobile phone. Two-dimensional poly(phenylene ethynylene) coordination networks: cyclic and single-stranded helical structures. Chemical vesicles, i.e., curved aggregates of polymers, have recently become a subject of increasing interest. In this contribution, we report on the formation of two-dimensional coordination polymers via binding of  $Zn(2+)$  to electron-deficient single or double phenylene ethynylene dendrimers. The synthetic approach was to incorporate the electron-deficient phenylene ethynyl

---

linkers into dendritic poly(amino acid)s, followed by the creation of supramolecular macrocycles by Zn(2+) complexation. Depending on the target nucleophile, different topologies of coordination polymers are formed, which include flat sheets, twisted-sheets, and, in some cases, "single
